Lapka

AI Recovery Companion

Continuous AI monitoring of your pet's post-surgical recovery

24/7 AI guidance

Photo healing tracker

Clinic marketplace

Oksana Karpenko · Oleksandr Bondarchuk

— PROBLEM

“The surgery went well. Now what?”

You bring your dog home after a planned surgery. The vet is busy, the chat stays silent. The incision looks red — is that normal healing or a complication? At 2 a.m. you google the symptoms and find ten contradictory answers.

The recovery period is a blind spot.

The owner is left alone with anxiety. Care is reactive and fragmented — “question → answer” instead of guidance. Complications are caught too late.

In Europe, approximately **85% of cats** and approximately **55% of dogs** are spayed or neutered during their lifetime.

≈**200 000 TPLO surgeries** are performed in Europe every year (estimated based on canine population, CCL incidence and veterinary procedure adoption).

Complex orthopedic surgeries require long recovery periods, often lasting **several weeks or even months**, with daily monitoring and strict adherence to postoperative care.

Lapka is an AI companion that runs **continuous monitoring** of recovery: it holds the full treatment context, analyzes a photo series over time, and alerts only when action is needed.

Not “faster.” AI does it differently — from reactive answers to proactive monitoring.

01

Prepares you ahead

Explains the conditions that can require surgery and what each one means — so you know the steps that follow the operation.

02

Tailored recovery plan

A step-by-step recovery plan built around the specific surgery and the prescribed post-op treatment.

03

Proactive check-ins

Reminds the pet parent to take control photos and log key data, so recovery is tracked over time — not guessed.

04

Red flags & reassurance

Flags potential warning signs early — and reassures you when everything is going to plan.

From diagnosis to daily recovery – one guided flow

— HOW IT WORKS

What pet owners get in Lapka v1.0 – the mobile app.

Nobody owns recovery.

Each rival covers a single stage of pet health. Post-operative recovery is a distinct, underserved window — and the one we're built for.

AI Pet Assistants

Ralph · PetPal AI+ · ClawMate

General Q&A — no real day-by-day recovery workflow

Closest rival

Pet Health Records

Pawprint · 11Pets · VetVault

Storage, not guidance — and not AI-led

Adjacent

Telemedicine

Vetster · Airvet · Dutch · Pawp

One-off consults, not continuous recovery

Overlaps later

Vet SaaS (B2B)

PetsApp · PetDesk · Otto · VitusVet

Clinic tools — our future B2B channel, not a B2C rival

Future market

Wearables

PetPace

Hardware cost, no treatment context

Potential partner

LAPKA · OUR PLACE

The recovery window nobody owns

- Beachhead — the one stage no rival is built for.
- We don't answer questions. We run the treatment day by day, holding the full case history.
- Recovery data compounds into a moat — then we expand into records, telehealth and clinics.

Recovery → Records → Telehealth → Clinics

Two revenue streams, one platform

● B2C · Owners

v1.0 · Mobile app

Freemium → subscription + AI credits

Basic tracker free. Subscription for the recovery period: unlimited photo analysis, priority vet access, full history.

ARPU ~\$10 / mo

Scalability: AI monitoring grows without a proportional rise in costs — the marginal cost of analyzing a photo trends to zero.

● B2B · Clinics & vets

v2.0 · + Web app

SaaS + commission

Subscription for marketplace presence, patient management and lead flow. Commission on online bookings.

Expanding revenue via new clinics

LTV potential: recurring revenue during recovery + repeat surgeries over the pet's life + upsell (pharmacy, insurance, clinic).

Owners first, clinics next

A beachhead sequence — with cheap, testable hypotheses on each side.

B2C · OWNERS — v1.0 mobile app

Micro-influencers & “vetfluencers”

Seed recovery stories where owners already scroll — low CAC.

Shelters as a B2C funnel

Adopters leave with a freshly-sterilized pet that needs monitoring.

Clinic discharge = B2C referral

A QR handed over at the highest-intent moment.

LLM SEO for the “2 a.m. googling” moment

Capture anxious post-op search with owned content.

B2B · CLINICS & VETS — v2.0

Direct outreach to surgical clinics

Fewer “is this normal?” calls, earlier complication catches, retention.

Trade shows & vet congresses

Pet-tech expos and vet congresses for partners and investors.

Integration with vet software (PIMS)

Recovery plan auto-created at discharge — distribution via partner.

Who we reach, what we say, how we show it

Pilot goal: validate demand for post-op recovery monitoring — and find which audience × message buys the cheapest lead.

01 TARGET AUDIENCE

- **Post-Surgery · highest intent**
Pet is recovering at home right now. Hard to target by interest — reach via retargeting + broad.
- **Pre-Surgery · highest planning intent**
Procedure is scheduled; they're actively researching. Vet clinics, sterilization, TPLO, pet insurance.

02 KEY MESSAGE

“Every pet heals differently.
Create a personalized AI recovery
plan after surgery.”

Alerts only when it matters. Otherwise Lapka simply confirms recovery is on track. That reassurance is the product.

Guidance, not diagnosis. Calm over fear. No medical claims — the framing is what gets ads rejected, not the product.

03 Example

Pilot budget ~€1-2k / 3-4 weeks

Target CPL €1-3 PL · €3-6 UK

CTR > 1%

Optimize for Lead, not clicks

We're building the product we needed ourselves

3,5 years dog owner

Oksana Karpenko

CO-FOUNDER · PRODUCT & GTM

The idea grew from a personal experience of a dog's recovery — that's our founder-market fit.

Focus: Product discovery, delivery & go-to-market

Background: B2B SaaS — FinTech · ERP · HRTech

Track record: 100+ customer interviews · led a market launch

Ops & teams: Scaled operations (80+ people) · implemented telephony/CRM/chatbot systems at the National Bank of Ukraine

AI-native: Hands-on with Claude/AI · CLUST Co-Founders Program graduate

4 years dog owner

Oleksandr Bondarchuk

CO-FOUNDER · OPERATIONS

QA + operations + hardware

Focus: Operational processes, product quality & delivery

Background: 6+ years in QA — web & hardware applications across the full SDLC

Quality craft: Tests smart hardware at Ajax Systems · Sets up test processes and hands-off to automation

Team & ops leadership: Built and led a B2C sales team at Alfa-Bank

AI-native: Hands-on with Claude/AI

Help us to become real

Our main ask right now

- A veterinary advisor for the team
- Intros to pet-tech investors and grants
- Team — hire Full-stack developer and sales / BD

Round · 25 000\$

Where the funds go:

- Product development — AI-driven Mobile App + Landing
- Pilots — Marketing campaign and hypothesis validation
