Eliminating Decision Fatigue. Automating Longevity.

An AI Maitre d' that orchestrates a swarm of specialized agents to run your meal management end-to-end - turning bio-data into delivered, pre-prepped kits with one 'Approve' click

Eating well is a full-time job - and decision fatigue wins

76% of people binged on junk in the last month simply because they had no mental energy left to decide what to cook or order.

1

The labour, not the choice

Physical prep tires 55% vs 26% mental (2.1:1). People want the chopping and shopping gone — not more advice.

2

Price is the wall

Cost is the #1 reason every cheaper meal solution was abandoned by this exact segment.

3

Six apps, no answer

Calorie apps, blood tests and grocery all live apart — so people fall back on fast food, or free ChatGPT.

A Maitre d' for your meals. You just Approve

1

Intake

Sync your wearables, upload blood tests, set tastes. Your bio-data, encrypted.

2

Orchestrate

A swarm of specialized agents plans the week and sources local prep-kits + groceries.

3

Delivered

A pre-filled cart lands. You review and tap Approve - nothing is ever auto-spent.

We lead with LABOUR removal — pre-prepped kits + delivery — not another dashboard.

We turn bio-data into delivered food. ChatGPT only gives you text; we execute end-to-end.

Bio-data in. Delivered, healthy meals out

Agent swarm: Bio-Data Intake · Recipe Architect · Prep-Kit Resolver · Geo-Logistics · Escrow & Micro-Settle

MVP	Intake + orchestrator + Prep-Kit Resolver + Instacart link-out + Approve gate.
V1	Kroger cart-fill pilot + variety/retention engine + referral + more agents.
V2	Insurer opt-in (health scores) + A2A microtransactions + institutional data.

We do execution. Everyone else stops at advice

Capability	MyFitness	Big Tech AI	Blueprint	ChatGPT	MuriTori
Turns bio-data into delivered food	×	×	✓	×	✓
Automates the physical labour (kits)	×	×	✓	×	✓
Multi-agent, local & geo-aware	×	~	×	×	✓
Affordable (not 1% elite)	✓	✓	×	✓	✓
'Approve' control, no auto-spend	~	~	n/a	×	✓
Verified bio-data + continuity	~	~	✓	×	✓

The real substitute is free ChatGPT — we win on execution (delivered food) + verified bio-data + continuity.

A \$15B US meal-kit market inside \$339B health food

TAM

~\$20B

US meal-kit + prepared-meal delivery

SAM

\$3-5B

Health-conscious millennials in dense US/EU metros

SOM

~\$170M ARR

Reachable market in 24m (Base)

- US meal-kit \$15.29B (2025), 7.3% CAGR; prepared-meal delivery ~\$5.5B, 12.2% (2026).
- ChatGPT proves the appetite for AI meal planning — and is the substitute we beat on execution.
- Prep-kit + delivery rails now exist (Instacart IDP, Kroger Partner Cart); metro-first is fulfillable.

Three revenue streams - subscription-led

Consumer subscription

87% of early revenue · capped AI Credits + \$5-10 top-ups

\$21 / user / mo

Insurer underwriting (B2B2C)

6% · ZK health scores for premium discounts

\$5 / opted-in (\$2 blended)

Institutional data

7% · anonymized data to clinics, pharma, FoodTech

\$6,000 / mo per contract

Margin protection: capped AI credits inside the \$21 fee shield us from volatile LLM costs — 80%+ gross margin.

Strong per-user economics; a growth-stage J-curve

ARPU	\$23 → \$28	Gross margin	~82%
CAC	\$200 (\$170)	Churn	5% / mo
LTV	\$370 → \$470	LTV : CAC	1.85x → 2.76x
Payback	~11 mo	Contrib.	\$16.5/user

24-month projection (Base)

Active users: M6 197 · M12 799 · M24 4,524
M24 rev \$140k/mo · 24-mo \$0.97M · raise \$9.0M

The honest read

No EBITDA breakeven in 24 months - a J-curve from the \$200 CAC. Breakeven is post-M24.

**RISK: meal-kit churn runs 10-15%/mo vs our 5%.
Prove retention and CAC before scaling.**

GTM Metro-first US: launch, PMF, scale

STAGE 1 · LAUNCH

M1-6 · prove the wedge

KPIS

- 200-400 paying beta
- Activation >40% · W4 retention >60%
- CAC ≤ \$200

ACTIONS

- Closed beta, 1-2 US metros
- Instacart link-out + Kroger cart pilot
- 10-15 biohacking/meal-prep creators
- WTP test on \$21 + kit

TOOLS

- Instacart IDP · Kroger Cart
- TikTok + Meta · Mixpanel
- Circle/Discord · Stripe+Recharge

STAGE 2 · PMF

M7-14 · prove retention

KPIS

- Churn <8% (toward 5%)
- LTV:CAC ≥ 2x · NPS >40
- 1.5-2.5k active · referral ≥15%

ACTIONS

- 4-6 metros · variety engine
- Referral loop (AG1-style)
- Podcasts + credentialed creators
- First insurer pilot

TOOLS

- Klaviyo · ReferralCandy
- Triple Whale · Amplitude
- HubSpot CRM · SEO/AEO

STAGE 3 · SCALE

M15-24 · scale + open B2B

KPIS

- LTV:CAC ≥ 3x
- 4-6k+ active · payback <11mo
- 3-6 institutional contracts

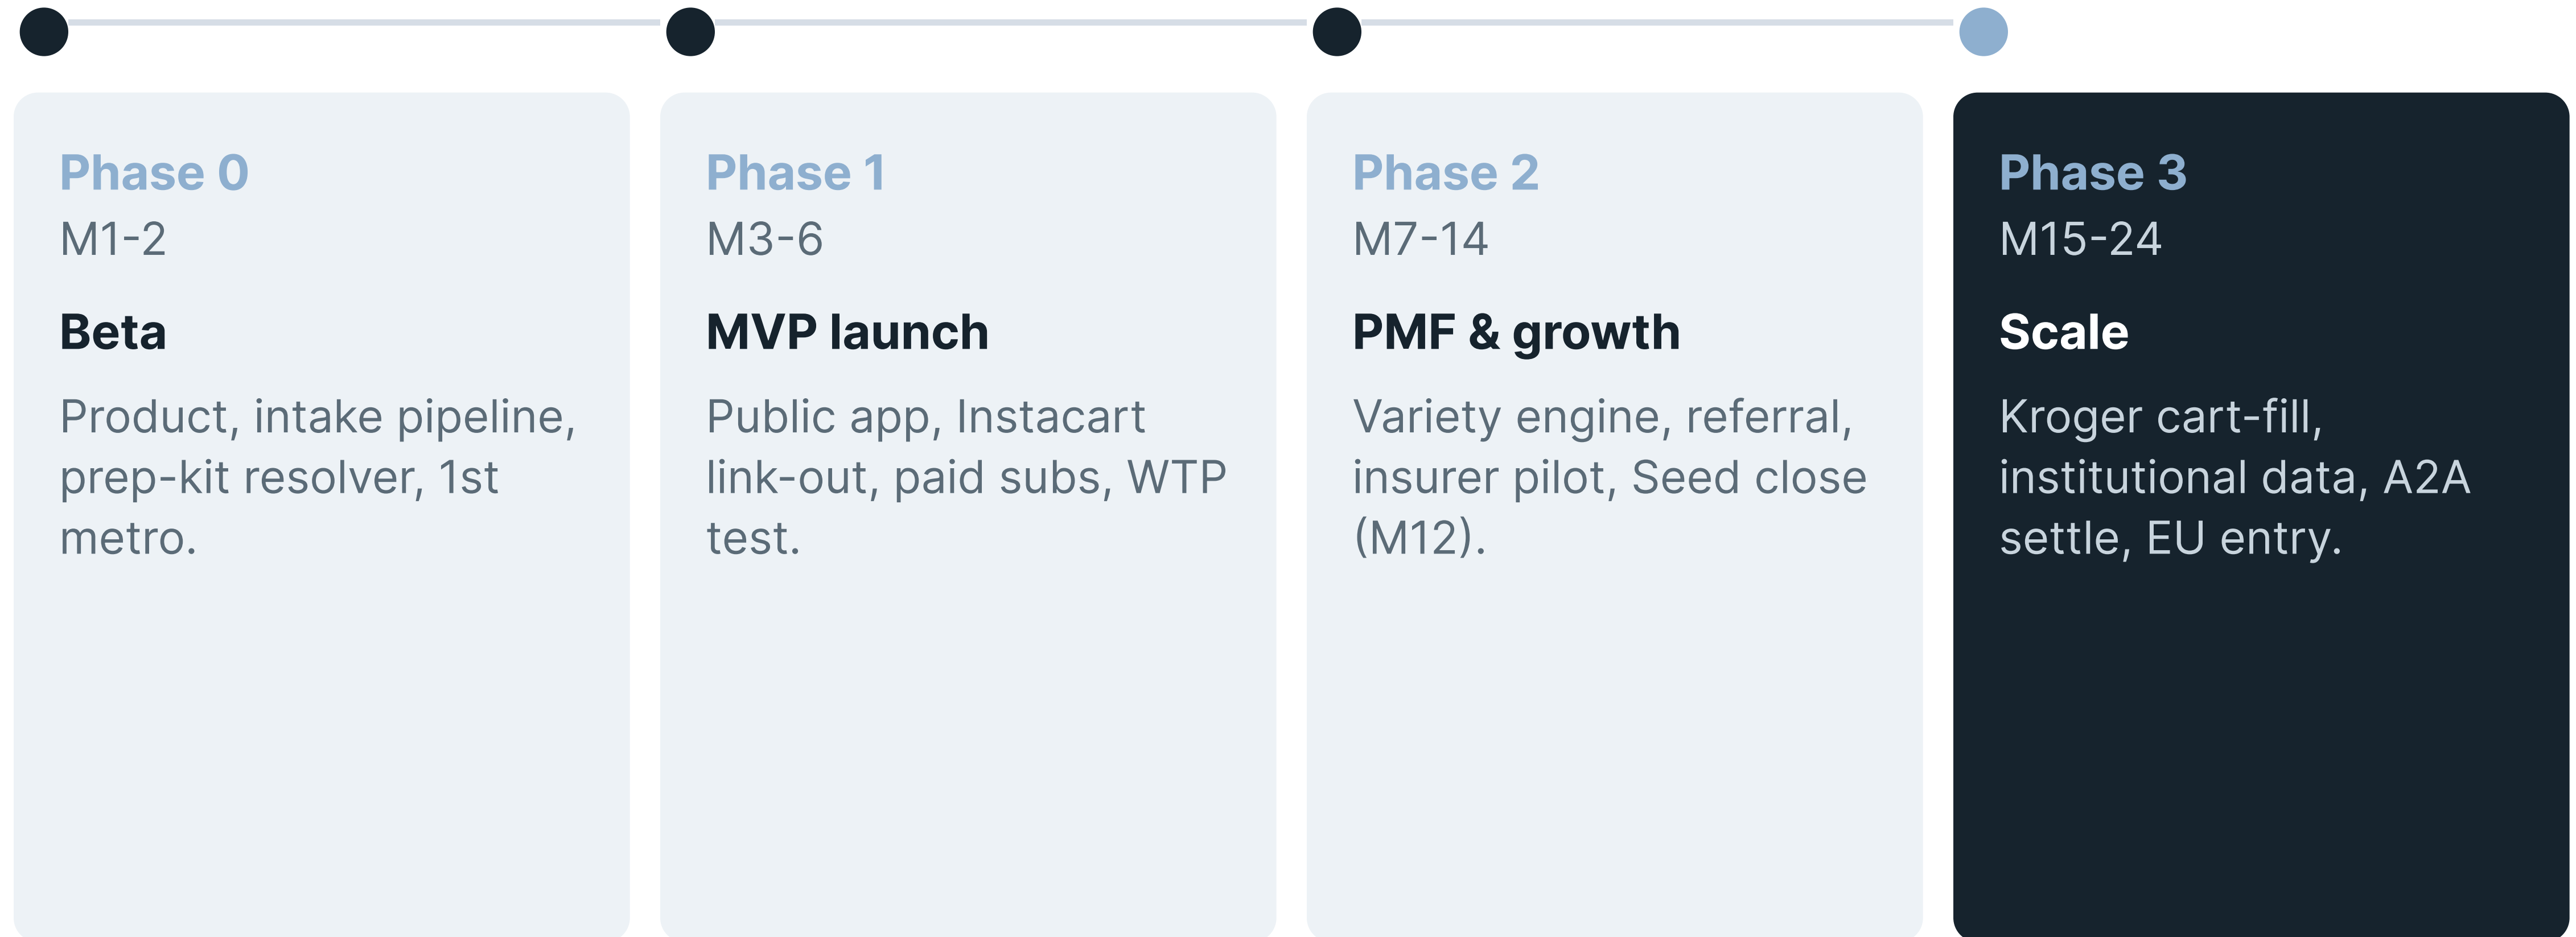

ACTIONS

- National US + EU (UK/Spain)
- Institutional data contracts
- Scale paid (TikTok>Meta) + creator
- A2A microtransactions live

TOOLS

- Segment (CDP) · data API
- Paid scale stack
- Partnership stack
